

Amended Claims With Mark-ups to Show Changes Made

30. (Amended) A system comprising:

a plurality of reverse communication channels; and

a plurality of forward communication channels, wherein:

each of the plurality of reverse communication channels and each of the plurality of forward communication channels utilize the same [carrier] frequency band that comprises forward and reverse direction communication channels;

each of the plurality of reverse communication channels and each of the plurality of forward channels have a unique code;

the plurality of reverse communication channels and plurality of forward channels carry data simultaneously.

34. (Amended) An apparatus comprising:

a transmitter configured to transmit data on a reverse communication channel;

and

a receiver configured to receive data on a forward communication channel,

wherein:

the reverse communication channel and the forward communication channel utilize the same [carrier] frequency band that comprises forward and reverse direction communication channels;

the reverse communication channel and the forward communication channels each have a unique code;

the reverse communication channel and the forward communication channel are configured to carry data simultaneously.

38. (Amended) An apparatus comprising:

a transmitter configured to transmit data on a plurality of forward communication channels; and

a receiver configured to receive data on a plurality of reverse communication channels, wherein:

each of the plurality of reverse communication channels and each of the plurality of forward communication channels utilize the same [carrier] frequency band that comprises forward and reverse direction communication channels;

each of the plurality of reverse communication channels and the forward communication channels each have a unique code;

Serial No. 09/189,793

Docket No. K-039

the reverse communication channels and the forward communication channels are configured to carry data simultaneously.
